Phosphorus (P) treatments:

From 1962-1980 two P treatments (0, P)

1962-1978 Applied as superphosphate. Not applied to fallow (1969, 1979, 1980)

1968, 1974 55 kgP/ha to potatoes

From 1981 onwards divided into four P treatments (P0, P1, P2, P3):

1981-83, 1988 Applied as superphosphate

1982[§] Possibly 50kgP/ha. In most Yield Books P1 and P3 shown as 25kgP/ha, on Field Plans shown as 50kgP/ha

Potassium (K) treatment:

1962-1978 Applied potassium chloride

1981 onwards Basal application to all plots in some years

Magnesium (Mg) treatment:

1974, 1976-78 Applied as Epsom salts (1974, 1976-77) and kieserite (magnesium sulphate) (1978)

1981 onwards Basal application to all plots in some years

Manganese (Mn) treatment:

1987-1990 Applied liquid foliar fertilizer at fourth leaf stage and before flowering. Amounts vary

Sulphur (S) treatment:

1991-1996 Applied as calcium sulphate
