

Woburn long-term liming experiment lime and fertilizer treatments 1962-1996

DOI: [10.23637/wcs10-Treatments-01](https://doi.org/10.23637/wcs10-Treatments-01)

Prepared by: Margaret J Glendining, CAS Department, Rothamsted Research, Harpenden, Herts, AL5 2JQ, UK.

Published by: Rothamsted Research

Date: December 2020

Description: Contains details of the lime applications, fertilizer treatments and basal fertilizer applied to the Long-term Liming Experiment at Woburn, 1962-1996.

- 1) Details of lime application dates and amounts applied, 1962-1996.
- 2) Details of fertilizer treatments (P, K, Mg, Mn and S), application amounts, dates and forms, 1962-1996.
- 3) Details of basal fertilizer (N, K and Mg), application amounts and forms, 1962-1996.

Site: W/CS/10. Stackyard field Section 3, Woburn Experimental Farm, Husborne Crawley, Woburn, Bedfordshire, UK. Latitude 52.0003, Longitude -0.6149

Woburn Long-term Liming experiment.
Lime application dates and amounts

W/CS/10
1962-1996

Woburn (Stackyard) total lime applied, 1962-1987: **Ground chalk (CaCO₃) tha⁻¹**

Harvest Year	1962	1963	1979	1982	1983	1987
Date applied	09/03/1962	19/10/1962	21/11/1978	25/11/1981	04/11/1982	13/11/1986
Lime Treatment						
None (0)	0	0	0	0	0	0
Low (L)	5	0	1	2	0	1
Medium (M)	10	2	2	5	5	1.5
High (H)	15	4	4	10	10	2.5

Summary of total lime applied, 1962-1987, Ground chalk (CaCO₃) tha⁻¹:

Lime Treatment	Rothamsted	Woburn
0	0	0
L	15	9
M	24.5	25.5
H	52.5	45.5

Dolomitic limestone (magnesium calcium carbonate) was applied in some years at Woburn, as a source of magnesium (Paul Poulton, *pers. comm.*)

Prepared by Margaret Glendining 2020 from plans and Yield Books.

Phosphorus (P) treatments:

From 1962-1980 two P treatments (0, P)

1962-1978 Applied as superphosphate. Not applied to fallow (1969, 1979, 1980)

1968, 1974 55 kgP/ha to potatoes

From 1981 onwards divided into four P treatments (P0, P1, P2, P3):

1981-83, 1988 Applied as superphosphate

1982[§] Possibly 50KgP/ha. In most Yield Books P1 and P3 shown as 25kgP/ha, on Field Plans shown as 50kgP/ha

Potassium (K) treatment:

1962-1978 Applied as potassium chloride

1981 onwards Basal application to all plots in some years

Magnesium (Mg) treatment:

1974, 1976-78 Applied as Epsom salts (1974, 1976-77) and kieserite (magnesium sulphate) (1978)

1981 onwards Basal application to all plots in some years

Manganese (Mn) treatment:

1987-1990 Applied liquid foliar fertilizer at fourth leaf stage and before flowering. Amounts vary

Sulphur (S) treatment:

1991-1996 Applied as calcium sulphate. Not applied in 1993 as crop failed

1994	0		0	0
1995	160	Nitram	0	0
1996	160	Nitram	0	0

Nitrogen (N) fertilizers:

AS = Ammonium sulphate

Nitrochalk = calcium ammonium nitrate

Nitram = ammonium nitrate

Compound = 25:0:16 compound fertilizer (% N:P:K)

Potassium (K) fertilizer

1981 onwards, as potassium chloride or compound (1985, 1991, 1992)

Magnesium (Mg) fertilizer:

1981 onwards, as magnesium sulphate or liquid chelated magnesium (1991)

Dolomitic limestone (magnesium calcium carbonate) was applied in some years at Woburn, as a source of magnesium (Paul Poulton, *pers. comm.*)
