

Broadbalk. Changes in soil organic carbon t ha⁻¹ (0-23cm)

Data includes adjustment for changes in bulk density on FYM treatments. All data is from continuous wheat sections. Starting values for all treatments in 1843 and the later FYM treatments were estimated (.....). Decreases between 1914 and 1936 are due to the introduction of regular fallowing in 1926; FYM was not applied in fallow years (- - -). Updated from Powlson et al, 2012.
