Notes: In January 1903 plots 1-13 and 14-17 were reduced in length by 5 feet (1.52 m) at the Northern end.
In 1906 plot 1 was reduced in length at the Southern end because of shading (see White Book for Park Grass, 1919-59, page 1)

Most plots halved in 1903; Ground or slaked lime (equivalent to 4.0 t/ha CaCO₃) was applied every 4 years (see above/below for exceptions) to half plots.

In 1903 the half-plots were designated as either Limed (L) [equivalent to current sub-plots "a" and "b"] or Unlimed (U) [equivalent to "c" and "d"] Plots 5/1, 5/2, 6, 12, 14, 15 and 17 were not divided at that time; plots 14, 15 and 17 were divided in 1920 and became part of the general scheme; plots 5/1, 5/2, 6 and 12 were not included in the general scheme.

A different schedule was followed on plots 18, 19 and 20 starting in 1920; HL = High Lime, LL = Light Lime (see table for amounts added).

Applications were as ground or slaked lime except for the supplementary dressings of ground chalk on 3-4th January 1956 and applications in 1960 and 1964
