

# Broadbalk Wheat Experiment plan and cropping 1852-1925

**DOI:** 10.23637/rbk1-sup-1534342858-02

Prepared by: Glendining, M.J & Poulton, P. R. Rothamsted Research, Harpenden, Herts, AL5 2JQ, UK.

Published by: Electronic Rothamsted Archive, Rothamsted Research

Date: November 2018, revised June 2021 with addition of cropping details.

**Description**: Experiment plan for the Broadbalk Wheat Experiment, 1852-1925, with details of fertilizer and manure treatments (not to scale). Also cropping details 1843-1925.

- Page 1: Cover page
- Pages 2-3: Broadbalk Wheat Experiment plan 1852-1925, showing plot layout and treatment codes, with full details of fertilizer and manure treatments applied.
- Pages 4-5: Broadbalk Wheat Experiment cropping details 1843-1925, showing winter wheat cultivars and the strip divisions. Also cropping 1839-1843 before the experiment was started.

#### **BROADBALK PLAN 1852-1925**

Most strips divided into 2 halves length ways (a and b) 1846-1893 a and b halves combined to make one strip in 1894. Strips divided into Top (T) and Bottom (B) halves most years 1894-1925

#### Fertilizer and organic manure treatments 1852-1925

(Fertilizer treatments on many plots varied 1843-51, see Lawes & Gilbert 1864 for details)

### Strip/Plot Treatments applied each year since 1852:

- 2a FYM since 1885. New plot made in 1885 receiving FYM as same rate as plot 2b
- 2b FYM since autumn 1843; originally called plot 2, named plot 2b in 1885 when plot 2a was made
- 3 Nil. Originally 2 half plots, 3 (nil since 1844) and 4 (1844-51 NP; since 1852 nil).
- Harvested separately until 1899
- 5 PKNaMg
- 6 N1 PKNaMa
- 7 N2 PKNaMg
- 8 N3 PKNaMg
- 9 N1\* PKNaMg since 1894; 9a and 9b received different treatments 1852-93:
  - 9a 1852-54 N1\*; 1855-84 N2\* PKNaMg; 1885-93 N1\* PKNaMg
  - 9b 1852-54 N2\*; 1855-84 N2\*; 1885-93 N1\*
- 10 N2

16

- 11 N2 P
- 12 N2 P Na\*
- 13 N2 PK
- 14 N2 P Mg\*
- N2 PKNaMg since 1873; 15a and 15b received different treatments 1852-72:

(timing of N application different to other plots, see below)

15a 1852-72 N2 PKNaMg

15b 1852-72 N1.5 PKNaMg + C

- N2\* PKNaMg since 1884; previously 1852-64 N4 PKNaMg; 1865-83 nil
- (A) Strips 17 and 18 treatments alternate each year:
  - 17 N2 applied in even years; PKNaMg applied in odd years
  - N2 applied in odd years; PKNaMg applied in even years
  - 19 C (rape cake); plot made full size in 1904. Originally half plot, 1852-78 N1.5 P + C; 1879-1903 C
  - 20 N2 KNaMg since 1906, previously nil

#### Annual treatment per hectare:

Nil: No fertilizer or manure

FYM: Farmyard manure at 35t supplying approx. 225 kgN/ha

C: Rape cake/castor bean meal: Supplying approx. 96kgN (N2).

0.56t 1852-78; 1.91t 1879-82; 2.12t 1883-1925 (omitted 1917-1920).

P: 35 kgP as superphosphate (omitted 1915)

K: 90 kgK as potassium sulphate (omitted 1915, 1917-19)

Na: 16 kgNa as sodium sulphate (omitted 1915)

Na\* 57 kgNa as sodium sulphate (omitted 1915, 1917-19)

Mg: 11 kgMg as magnesium sulphate (omitted 1915)

Mg\* 31 kgMg as magnesium sulphate (omitted 1915, 1917-19)

#### Nitrogen: Annual treatment per hectare

N1: 48 kgN as ammonium sulphate N1\*: 48 kgN as sodium nitrate N1.5 72 kgN as ammonium sulphate N2\*: 96 kgN as sodium nitrate

N2: 96 kgN as ammonium sulphateN3: 144 kgN as ammonium sulphateN4: 192 kgN as ammonuim sulphate

#### **Timing of Nitrogen applications:**

Ammonium sulphate:

1852-72 All applied in autumn

1873-77 All applied in autumn, except plot 15 in spring 1878-83 All applied in spring, except plot 15 in autumn

1884-1967 24 kgN applied in autumn, remainder in spring (except plot 15 all in autumn)

Sodium nitrate (N\*):

1867-1967 All applied in spring, as one application except N2 (strip 16) was applied as two equal

amounts since 1899, applied from six days to six weeks apart

## **Broadbalk Winter Wheat Experiment Cropping 1843-1925**

| Winter Wheat  | Harvest        |                |                 |          |        |        |  |  |

Winter wheat (W) grown every year, except for occasional bare fallow (F, no crop) to control weeds. Harvest year refers to the year in which the crop was harvested. Winter wheat was sown the previous autumn. The first crop was sown in autumn 1843 and harvested in summer 1844. Fertilizer and manures were applied to the different treatment strips, which ran the whole length of the field.

#### Cropping on the whole field before the wheat experiment was started in 1843:

| Turnips | 1839 | FYM applied             |
|---------|------|-------------------------|
| Barley  | 1840 | No fertilizer or manure |
| Peas    | 1841 | No fertilizer or manure |
| Wheat   | 1842 | No fertilizer or manure |
| Oats    | 1843 | No fertilizer or manure |

#### Straw incorporation, 1867-1879:

The straw which grew on strip 5a-8a, 11a-14a and 17a or 18a in the previous season was chopped and incorporated, 1867-1879 only. No straw was incorporated on the 'b' strips. Strips 17a and 18a alternated, with straw incorporated in the year when N fertilizer was not applied (see plan for details).
